

Web Automation with Selenium Webdriver

Andrew Malone

Harvard abcd-www

November 13, 2013

SELENIUM

Selenium

Selenium is a suite of tools to automate web browsers across many platforms.

Confusion!

Selenium

Selenium IDE

Selenium RC

Selenium 1

Selenium 2

Selenium Webdriver

Selenium Server

Selenium Grid

Webdriver

Selenium Webdriver makes direct calls to the browser using each browser's native support for automation.

Current browser support

Google Chrome 12+

Internet Explorer 6, 7, 8, 9

Firefox 3+

Opera 11.5+

HtmlUnit 2.9

Android – 2.3+

iOS 3.2+

Safari 5.1+

Language bindings

Java

Perl

C#

PHP

Ruby

Haskell

Python

Objective-C

Javascript (Node)

Examples in this presentation will be in Python

GETTING UP AND RUNNING

Assumptions

Python is installed – version 2.6, 2.7, 3.2 or 3.3

Selenium Webdriver bindings are installed
(available as a Python package)

Starting a browser session

```
# import webdriver  
from selenium import webdriver  
  
# start a browser session  
browser = webdriver.Chrome()  
  
# Load a web page  
browser.get("http://w3.abcd.harvard.edu")
```

LOCATING ELEMENTS

Elements

Interactions are with specific elements on a page.

An element is an individual DOM node.

Webdriver location strategies

Id	Partial link text
Name	Class name
Tag name	Css selector
Link text	Xpath

Webdriver location strategies

```
<input type="text" name="textInput" id="textInput" class="input">
```

id `browser.find_element_by_id("textInput")`

name `browser.find_element_by_name("inputName")`

tag name `browser.find_element_by_tag_name("input")`

class name `browser.find_element_by_class_name("input")`

css `browser.find_element_by_css_selector("input.input")`

xpath `browser.find_element_by_xpath("/input[@name=textInput]")`

```
<a href="/index.html">Web page</a>
```

link text `browser.find_element_by_link_text("Web page")`

partial link text `browser.find_element_by_partial_link_text("page")`

Singular and Plural

Singular

```
element = browser.find_element_by_css_selector("a.link")  
element.click()
```

Finds the first element that matches the selector

Returns the element

Throws a Webdriver exception if no match is found

Singular and Plural

Plural

```
elements = browser.find_elements_by_css_selector("a.link")  
elements[0].click()
```

Finds all elements that match the selector

Returns a list of elements

Returns an empty list if no match is found

Alternate locator syntax

These two statements are equivalent

```
cheese = browser.find_element_by_name("cheese")
```

```
from selenium webdriver. common. by import By  
cheese = browser.find_element(By. NAME, "cheese")
```

Choosing a location strategy

Use id or name whenever possible

CSS attribute selectors and pseudoclasses can be extremely powerful

Use xpath as a last resort

CSS attribute selectors

```
<a href="index.html?form=registerForm&user=newUser">Register</a>
```

Attribute contains:

```
a[href*=registerForm]
```

```
<a href="someExternalDocument.pdf">Read this!</a>
```

Attribute ends with:

```
a[href?=pdf]
```

CSS pseudoclasses

```
<table id="datatable">
  <tr>
    <th>1</th>
    <td>Num 1</td>
    <td>Num 2</td>
  </tr>
  <tr>
    <th>2</th>
    <td>Num 3</td>
    <td>Num 4</td>
  </tr>
</table>
```

#datatable tr:nth-child(2) td:nth-of-type(1)

XPATH alternatives

```
<table id="datatable">
  <tr>
    <th>1</th>
    <td>Num 1</td>
    <td>Num 2</td>
  </tr>
  <tr>
    <th>2</th>
    <td>Num 3</td>
    <td>Num 4</td>
  </tr>
</table>
```

```
//table[@id='datatable']/tr[2]/td[1]
```

XPATH alternatives

```
<table id="datatable">
  <tr>
    <th>1</th>
    <td>Num 1</td>
    <td>Num 2</td>
  </tr>
  <tr>
    <th>2</th>
    <td>Num 3</td>
    <td>Num 4</td>
  </tr>
</table>
```

//th[text()='2']/following-sibling::td[1]

BUILDING A SIMPLE SCRIPT

Interaction methods

click the element

```
element.click()
```

type into the element

```
element.send_keys("some text")
```

is the element visible to a user

```
element.is_displayed()
```

get an attribute of the element

```
element.get_attribute("name")
```

get the text of the element

```
element.text
```

```
from selenium import webdriver

browser = webdriver.Chrome()
browser.get("https://www.directory.harvard.edu/")
browser.find_element_by_name("lastName").send_keys("Malone")
browser.find_element_by_id("search").click()
browser.find_element_by_link_text("Andrew P. Malone").click()
xpath = "//font[text()='Appointment Title:']/../following-sibling::td"
title = browser.find_element_by_xpath(xpath).text

if title == "Senior Systems Operations Analyst":
    print "Title is correct"
else:
    print "Title is not correct"
```

Tips

Search other directory and networking sites:
[Harvard Medical School White Pages](#).
[Department Listings](#).

Search Help

Need [help](#) with your search?

Search the Public Harvard Directory

To look up Harvard students, faculty, and staff members, fill in one or more of the fields and click Search.

Last Name:	<input type="text"/>

```
browser.findElement_by_link_text("Andrew P. Malone").click()
```

Tips

Search other directory and networking sites:
Harvard Medical School White Pages.
Department Listings.

Listing Detail

Name: Andrew P. Malone
Appointment Title: *Senior Systems Operations Analyst*
Department: CADM/VPF/FSS Resch Admin Syst
Office Phone: +1 617 881 5015

Search

Need help?

```
<tr>  
  <td align="left" width="32%" valign="top">  
    <font face="Arial, Helvetica, sans-serif" size="2">Appointment Title:</font>  
  </td>  
  <td align="left" width="68%" valign="top">  
    <font face="Arial, Helvetica, sans-serif" size="2">  
      <i>Senior Systems Operations Analyst</i>  
    </font>  
  </td>  
</tr>
```

[Search Again](#)

```
xpath = "//font[text()='Appointment Title:']/../following-sibling::td"  
title = browser.find_element_by_xpath(xpath).text
```

```
from selenium import webdriver

browser = webdriver.Chrome()
browser.get("https://www.directory.harvard.edu/")
browser.find_element_by_name("lastName").send_keys("Malone")
browser.find_element_by_id("search").click()
browser.find_element_by_link_text("Andrew P. Malone").click()
xpath = "//font[text()='Appointment Title:']/../following-sibling::td"
title = browser.find_element_by_xpath(xpath).text

if title == "Senior Systems Operations Analyst":
    print "Title is correct"
else:
    print "Title is not correct"
```

Tips

Learn and use the web inspector and browser console

`$("#css selector")`

`$x("xpath selector")`

PAGE OBJECTS

Page object pattern

Keep all the webdriver interactions in one place

Adds a layer of abstraction between webdriver implementation and website/application functionality

Tips

Search other directory and networking sites:
[Harvard Medical School White Pages](#).
[Department Listings](#).

Results page

```
class Results_Page(Page):  
    locators = {  
        "title": "xpath=//font[text()=' Appointment  
                    Title: ']/../following-sibling::td"  
    }  
  
    def title(self):  
        return self.find(self.locators["title"]).text
```

```
from selenium import webdriver
browser = webdriver.Chrome()
search_page = Search_Page(browser).go()
search_page.set_last_name("Mal one")
results_list = search_page.search()
results_page = results_list.click_name("Andrew P. Mal one")
title = results_page.title()
```

Why use page objects?

When underlying source of pages change, updates only need to be made in one place

Allows script writers to focus on tests, not on details of webdriver interactions

WHAT CAN YOU USE THIS FOR?

Streamline testing efficiency

Data staging

Creating specific application state for testing

Other uses

Automated test execution

Data driven test

Cross browser testing

Running Selenium on a server

Integration with a build process

RISKS

“Tools can extend or enhance or enable fabulous testing. But by accelerating some action, tools can enable us to do bad testing faster than ever...”

<http://www.developsense.com/blog/2013/02/manual-and-automated-testing/>

Automation is software development

Does your team have the right skills to create maintainable, extendable, reliable code?

Scope creep

Aiming for 100% test coverage is not the right goal

Focus instead on reducing risk or increasing efficiency

Don't be like this...

Be like this!

THANK YOU!

Andrew Malone
